

PRESS RELEASE
FOR IMMEDIATE DISTRIBUTION

May 12, 2009 – Cranston, RI - Exxon Mobil Billings Refinery has awarded eNPure Process Systems, Inc. of Cranston, R.I., a contract to fabricate three triplex boiler feed water filtration skids with remote control panels.

The skids will be manufactured to adhere to Exxon Mobil's stringent quality requirements and will be produced to meet the 25 week fast-track delivery required by the company.

The \$1,000,000 plus contract includes two Anthracite filtration skids and one Zeolite Softener skid, each with terminal junction boxes, and a remote control panel. Fabrication and assembly will be undertaken by eNPures' sister company, RICSA-MBS International, LLC and be subcontracted to its manufacturing partner, RICSA Industrial, S.A. de C.V., located in Queretaro, Mexico. The design of the filtration skid proposed some unique challenges according to eNPure's Chief Engineer, Fred Clark. “Not only did the filter vessels have to be fabricated in strict accordance with Exxon Mobil engineering standards and quality assurance requirements”, said Clark, “but the process design had to accommodate re-use of existing analog-controlled subsystems. All vessel materials are dual-certified to either 316/316L stainless or 2205 duplex S31803/S32205, and must undergo rigorous testing for conformance to ExxonMobil specifications.”

eNPure's superior technical documentation and exceptional pricing played a major role in the company's successful bid.

Steven Bloom, President of eNPure and RICSА-MBS International, states that their ability to value engineer process applications and water treatment systems; paired with the expertise of their manufacturing partners, results in cost effective, high quality solutions. “Our workflow process and business model” states Bloom, “offers our customers fabricated products at quality that exceeds their expectations, while reducing their overall manufacturing and sourcing costs.”
